

## Corset Instruction & Care

For maximum corset life we recommend hand washing or washing on delicate cycle cold water and hanging to dry.

For best fit - untie the back strings of your corset and loosen by pulling the sides of the corset away from the strings. Unzip or unhook the front (depending on the style) and put it on like a jacket and fasten front. Pull the back strings (4 of them) all at once until the desired fit. From then on, the back is finished and you will be able to put it on and off with the front closure and minor string adjustments.

**Note: Although this garment offers firm control, it is not a waist training corset and the strings should only be pulled in to a healthy and comfortable degree. This corset will not withstand extreme cinching and was not designed to train the waist.**
